EXPERIENCE

Jio Platforms Limited

Data Scientist

Navi Mumbai, India

Aug 2023 – Present

- **Datacurio – No-Code Data Exploration & AI Copilot Platform:**
 - * **Platform Development:** Contributed as a core team member to building a secure no-code analytics platform over **300+ Hive tables**, enhancing data governance and analytical productivity.
 - * **DataCopilot – Conversational Text-to-HiveQL:** Engineered a secure Text-to-HiveQL chatbot for Hive analytics, enabling query generation, execution, and result interpretation with production-grade accuracy and safety checks.
 - * **Scalable Async Architecture:** Architected **Celery**-based async execution and memory management, reducing compute costs by **30%** while maintaining **99.9% uptime**.
 - * **LLM Evaluation & Observability:** Incorporated **Langfuse** for tracing prompt quality, latency, and errors in DataCopilot, and leveraged BIRD benchmarks for iterative improvements in query accuracy.
 - * **Schema Filtering:** Developed **Milvus**-powered schema filtering, achieving **90% schema precision**.
 - * **Context Enrichment:** Implemented **Elasticsearch**-driven context enrichment for query disambiguation.
- **SevaFirst – LLM-Powered Incident Management Platform:**
 - * **RAG-Based Incident Chatbot:** Engineered a production-grade RAG chatbot integrating ticket databases and **Milvus** vector stores, serving **300+ daily users** and reducing incident resolution time by **35%**.
 - * **Automation & Text-to-SQL:** Designed conversational workflows for automated ticket creation and a validated Text-to-SQL pipeline, handling **200+ weekly queries**.
 - * **Knowledge Ingestion:** Implemented automated document scraping and embedding pipelines to maintain **100% data freshness**.

Huawei Technologies India Pvt Ltd

Machine Learning Engineer Intern

Remote

Jun 2022 – Jul 2022

- **VM Placement Optimization System:** Designed an AI-driven resource management framework for cloud VM placement, combining workload forecasting and load balancing to improve server utilization.
- **Workload Forecasting:** Engineered **LSTM** and hybrid **LSTM-Prophet** models for accurate short-term VM load prediction in non-stationary and bursty cloud workloads.
- **Load Balancing:** Developed and evaluated Round-Robin, Least-Loaded, and forecast-aware load balancing strategies, reducing overload rates by **5% relative** compared to reactive baselines.

EDUCATION

Indian Institute of Technology, Delhi

B.Tech, Computer Science and Engineering

New Delhi, India

Jun 2023

PROJECTS

Tamper-Evident Digital Electoral Roll System

Academic Capstone Project

Aug 2022 – Dec 2022

- **Secure Backend Architecture:** Engineered an electoral roll management system using **FastAPI**, mitigating insider threats and unauthorized record modifications.
- **Immutable Audit Ledger:** Designed a tamper-evident storage layer with **AWS QLDB**, for verifiable audit trails.
- **Authentication & Cryptographic Security:** Implemented a **Kerberos**-inspired authentication protocol with digital signatures and hash-chain validation to prevent replay attacks and ensure end-to-end verifiability.

SKILLS

Programming: Python, C++, SQL

LLMs & GenAI: Agentic AI, RAG, Multi-Agent Systems, Prompt Engineering, LangChain, LangGraph, CrewAI, LiteLLM, OpenAI / Azure OpenAI

Search & Knowledge Systems: Milvus, Elasticsearch, FAISS, ChromaDB, Neo4j, Oracle GraphDB

Backend & APIs: FastAPI, REST APIs, Celery, Microservices

Data & Big Data: Hive, PostgreSQL, MongoDB, Redis

DevOps & Observability: Docker, Kubernetes, Azure DevOps, Langfuse, Langsmith

ML Frameworks: Tensorflow, Scikit-learn, PyTorch

CERTIFICATIONS

Microsoft Certified: Azure AI Fundamentals
